

SUBMERSIBLE WATER PUMP

98921.

These instructions accompanying the product are the original instructions. This document is part of the product, keep it for the life of the product passing it on to any subsequent holder of the product. Read all these instructions before assembling, operating or maintaining this product.

This manual has been compiled by Draper Tools describing the purpose for which the product has been designed, and contains all the necessary information to ensure its correct and safe use. By following all the general safety instructions contained in this manual, it will ensure both product and operator safety, together with longer life of the product itself.

All photographs and drawings in this manual are supplied by Draper Tools to help illustrate the operation of the product.

Whilst every effort has been made to ensure the accuracy of information contained in this manual, the Draper Tools policy of continuous improvement determines the right to make modifications without prior warning.

1. INTRODUCTION

1.1 INTRODUCTION:

USER MANUAL FOR: Submersible pump.

Stock No: 98921.

Part No: DSWP1000A.

1.2 REVISIONS:

Date first published March 2019.

As our user manuals are continually updated, users should make sure that they use the very latest version.

3. WARRANTY

3.1 WARRANTY

Draper tools have been carefully tested and inspected before shipment and are guaranteed to be free from defective materials and workmanship.

Should the tool develop a fault, please return the complete tool to your nearest distributor or contact

Draper Tools Limited, Chandler's Ford, Eastleigh, Hampshire, SO53 1YF. England.

Telephone Sales Desk: (023) 8049 4333 or Product Help Line (023) 8049 4344.

A proof of purchase **must** be provided with the tool.

If upon inspection it is found that the fault occurring is due to defective materials or workmanship, repairs will be carried out free of charge. This warranty period covering labour is 12 months from the date of purchase except where tools are hired out when the warranty period is 90 days from the date of purchase. The warranty is extended to 24 months for parts only. This warranty does not apply to any consumable parts, any type of battery or normal wear and tear, nor does it cover any damage caused by misuse, careless or unsafe handling, alterations, accidents, or repairs attempted or made by any personnel other than the authorised Draper warranty repair agent.

Note: If the tool is found not to be within the terms of warranty, repairs and carriage charges will be quoted and made accordingly.

This warranty applies in lieu of any other warranty expressed or implied and variations of its terms are not authorised.

Your Draper warranty is not effective unless you can produce upon request a dated receipt or invoice to verify your proof of purchase within the warranty period.

Please note that this warranty is an additional benefit and does not affect your statutory rights.

Draper Tools Limited.

4. INTRODUCTION

4.1 SCOPE

This machine was designed for pumping clear or dirty water. It is ideally suited to pumping out garden ponds where the water is free of debris.
These pumps are not designed for use in fish ponds.

4.2 SPECIFICATION

Stock No.	98921
Part No.	DSWP1000A
Motor:	
Rated voltage	230V
Rated frequency	50Hz
Rated input	1000W
Output aperture size	25mm
Max. flow rate	91L/min
Max. head height	40M
Max. Particle Size	1mm
Degree of protection against moisture	IPX8

Warning: This product must be used in conjunction with a residual current device (RCD)

4.3 HANDLING AND STORAGE

These submersible pumps are designed to be moved to different locations. Ensure they are always operated on a level surface.

5. HEALTH AND SAFETY INFORMATION

Have this tool repaired by a qualified person. This tool is designed to conform to the relevant international and local standards and as such should be maintained and repaired by someone qualified; using only original parts supplied by the manufacturer: This will ensure the tool remains safe to use.

5.1 GENERAL SAFETY INSTRUCTIONS FOR POWER TOOL USE

Warning: Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

The term "power tool" in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1) Work area safety

- a) Keep work area clean and well lit. Cluttered or dark areas invite accidents.
- b) Do not operate power tools in explosive atmospheres, such as in the presence flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- c) Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

2) Electrical safety

- a) Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adaptor plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
- b) Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- c) Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- d) Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
- e) When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- f) If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.

3) Personal safety

- a) Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- b) Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- c) Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.

5. HEALTH AND SAFETY INFORMATION

3) Personal safety continued...

- e) Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- f) Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.

4) Power tool use and care

- a) Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- b) Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- c) Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- d) Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool.
Power tools are dangerous in the hands of untrained users.
- e) Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts & any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.

5) Service

- a) Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

IMPORTANT

If using an extension lead, follow the instructions that came with your lead regarding maximum load while cable is wound. If in doubt, ensure that the entire cable is unwound. Using a coiled extension lead will generate heat which could melt the lead and cause a fire.

5. HEALTH AND SAFETY INFORMATION

5.2 ADDITIONAL SAFETY INSTRUCTIONS FOR SUBMERSIBLE WATER PUMPS

- When carrying or lifting the submersible pump always use the transport handle, DO NOT carry or lift using the power cable or float switch cable.
- Before connecting to the power supply:
 - A residual current circuit breaker (RCD) must be used for all applications (Draper Stock No.69307 or 89301).
 - The electrical supply should be the same as that stated on the rating plate.
- Submersible water pumps should always be transported, stored, and submersed vertically.
- **Always** ensure that your hands are dry when connecting and disconnecting the power supply.
- **Never** operate the pump below the top of the water inlet.
- The area being pumped should be kept clear, and nobody should enter the area while pump is operating.
- Do not pump explosive or flammable liquids.

Important: please read before use.

The following additional instructions must be followed at all times. Failure to do so could invalidate the guarantee of this submersible water pump.

- The float switch must be clamped in position using the cable clamp recess.

NOTE: The pump, should be suspended using a rope, chain or stood on a brick to prevent any gravel etc. being sucked into the pump and damaging the impeller.

- If the pump fails to operate, disconnect from mains supply. Remove the base and gently turn the impeller using a screwdriver. Check for obstruction in the impeller, i.e. stones/gravel etc.
- The float switch fitted to the pump is **NOT** suitable for continuous use as an ON/OFF switch.
- If the power cable becomes damaged it must be changed by the manufacturer or it's service agents.

IMPORTANT: Any pump returned to Draper Tools Limited under warranty must be clean. If a pump is received that has **NOT** been cleaned, it will be returned to you at your cost.

Make sure the power supply information on the machine's rating plate are compatible with the power supply you intend to connect it to.

THE FOLLOWING ADDITIONAL INSTRUCTIONS MUST BE FOLLOWED AT ALL TIMES. FAILURE TO DO SO COULD INVALIDATE THE GUARANTEE OF THIS SUBMERSIBLE WATER PUMP.

1. The float switch must be clamped in position using cable clamp recess.
2. Clean water pumps are not suitable for use in dirty water.
3. These water pumps are designed for pumping water only.

The addition of any chemicals, chlorine or additives to the water could damage the pump, this would be considered misuse and would not be covered under warranty.

4. When using clean water pumps in a pond or where there is gravel, mud, leaves, etc.

NOTE: The pump, should be suspended using a rope or chain or stood on a brick to prevent any gravel, etc., being sucked into the pump.

5. If the pump fails to operate, disconnect from mains supply. Remove output elbow and turn the impeller using a screwdriver or finger. Check for obstruction in the impeller, i.e. stones/gravel, etc.

6. The float switch fitted to this pump is not suitable for continuous use as an on/off switch.

IMPORTANT: ANY PUMP RETURNED TO DRAPER TOOLS UNDER WARRANTY MUST BE CLEAN. IF A PUMP IS RECEIVED THAT IS NOT, OR HAS NOT BEEN CLEANED, IT WILL BE RETURNED TO YOU AT YOUR COST.

5. HEALTH AND SAFETY INFORMATION

5.3 CONNECTION TO THE POWER SUPPLY

Caution: Risk of electric shock. Do not open.

230V: 98911, 98912, 98914, 98917, 98918, 98919 & 98921.

These machines come supplied with a UK standard 3 pin plug fitted. Designed for connection to a domestic power supply rated at 230V AC.

Because it is constructed mostly of metal parts, it is a Class 1 machine; meaning, it must have an earth connection in the power supply. This is to prevent electrocution in the event of a failure.

Apart from replacing the fuse in the plug, no other electrical work is recommended on this produce.

110V: 98913 & 98920

This machine should be connected to a 16amp power supply either using the appropriate yellow 16amp plug or directly into the fused mains supply. Both of these operations should be carried out by a qualified electrician.

This appliance is Class I[†] and is designed for connection to a power supply matching that detailed on the rating label and compatible with the plug fitted.

If an extension lead is required, use an approved and compatible lead rated for this appliance. Follow all the instruction supplied with the extension lead.

[†]Earthed : This product requires an earth connection to protect against electric shock from accessible conductive parts in the event of a failure of the basic insulation.

IMPORTANT

If using an extension lead, follow the instructions that came with your lead regarding maximum load while cable is wound. If in doubt, ensure that the entire cable is unwound. Using a coiled extension lead will generate heat which could melt the lead and cause a fire.

6. TECHNICAL DESCRIPTION

6.1 IDENTIFICATION

- ① Outlet.
- ② Carry handle.
- ③ Float switch cable clamp presses.
- ④ Approved 3 pin non-rewireable moulded plug and cable (not fitted to 110V models)
- ⑤ Automatic cut off float switch (not fitted to Draper Stock No.98911).
- ⑥ Filter base plate.
- ⑦ Hose adaptor.

6.2 MAIN COMPONENT DESCRIPTIONS

The **CARRY HANDLE** for ease of transportation.

The **HOSE ADAPTOR** allows the use of different size hoses.

The **WATER OUTLET**; Pumped water is expelled from this aperture.

The **PLUG** connects the machine to your power supply.

The **FLOAT SWITCH** will switch the pump on/off automatically at set water levels (user adjustable).

The **MAIN PUMP BODY** houses the pumps motor, it should be submerged in use to help cool the motor.

The **INLET/IMPELLER HOUSING**; This is where the water to be pumped enters the machine. The impeller is mounted in the top section of the housing.

7. UNPACKING AND CHECKING

7.1 PACKAGING

Carefully remove the machine from the packaging and examine it for any sign of damage that may have happened during shipping. Lay the contents out and check them against the parts shown below. If any part is damaged or missing; please contact the Draper Helpline (the telephone number appears on the Title page) and do not attempt to use the machine.

The packaging material should be retained at least during the guarantee period: in case the machine needs to be returned for repair.

Warning! Some of the packaging materials used may be harmful to children. Do not leave any of these materials in the reach of children.

If any of the packaging is to be thrown away, make sure they are disposed of correctly; according to local regulations.

8. READYING THE PUMP

8.1 INSTALLATION OF PARTS – FIG.1

WARNING: DO NOT MAKE ANY OF THE FOLLOWING ADJUSTMENTS WITH THE PUMP CONNECTED TO THE POWER SUPPLY.

Before first use it is important to carry out a visual check of the product to ensure that the product has not suffered any transit damage and is safe to use.

To connect the hose adaptor, simply screw it into its threaded housing.

To adjust the stepped hose adaptor for your chosen size of lay flat hose, check the internal dimensions of your lay flat hose and select either section of the stepped adaptor to connect your hose to. To gain the full benefit of the increase in flow rate that can be achieved with the larger hose/stepped adaptor apertures it will be necessary to remove the unused smaller section of the stepped adaptor, this is best accomplished with a small hacksaw sawing through the threaded area will reveal the larger bore (applicable to 98911, 98912, 98913, 98914, 98917, 98918, 98920, 98921 models only).

NOTE: The adaptor can now only be used with a large bore hose and cannot be used with a smaller bore hose.

Your chosen hose should be secured with a suitable retaining clip. The float switch should be allowed to move freely without any restrictions. The float switch can be set to turn the pump on/off at differing water levels, this will be covered in the following section of this manual.

9. INSTALLING THE PUMP

9.1 PUMPING DISTANCE AND VOLUME – FIG.2

Fig.2 provides a guide for volumes pumped in relation to hose height.

Horizontal pumping distance is directly affected by the working head height (Maximum head height minus actual working head height x factor of 10 equals the approximate horizontal pumping distance in metres using solid delivery hose).

For example:

Maximum head height is 9.5 metres, minus actual working head height of 5 metres = 4.5 metre x factor of 10 is 45 metres (approximate pumping distance).

9. INSTALLING THE PUMP

9.2 FLOATING SWITCH - FIGS. 3 - 6

An automatic float switch (5) is fitted to the pump. This enables the pump to switch off automatically when the water has reached the minimum level.

As the water level drops the float switch will fall with the water level.

When the float switch reaches the minimum level it will automatically switch the pump off.

9. INSTALLING THE PUMP

9.3 SET CUT OFF FLOAT HEIGHT FIG. 7

The float switch can be set to a specific cut off level by increasing or decreasing the length of cable (B) between the cable clamp recess (C) and float switch (5).

9.4 SET INTEGRAL FLOAT HEIGHT FIG. 8 (Stock No. 98917& 98918 only)

An integral float switch is fitted to the pump, this enables the pump to switch off automatically when the water has reached the minimum level. To enable the float switch ensure the mode selection lever is pushed down to **Auto**.

As the water level drops the float switch will fall with the water level. The minimum level can be changed by pinching the levers together and raise or lower to desired level. When the float switch reaches the minimum level it will automatically switch the pump off.

This pump can also be run in a continuous mode by pulling the mode selection lever up so it indicates on the side of the pump **Manual**. The pump should not be left unattended at any time, to ensure the pump does not run dry.

9. INSTALLING THE PUMP

9.5 PLACEMENT - FIGS. 9 - 11

The pump must be fully submersed before the power is switched on. DO NOT turn on when dry.

When submersing or lifting the pump it will be necessary to use a rope or chain, this must be attached to the transport handle.

If pumping water from a sandy or muddy floor bed, the pump can be suspended using a rope or chain (not supplied) fixed to the handle. DO NOT use any of the electrical cables for this purpose.

When pumping flood water from a room or cellar, installation of the pump should be in a drain well (if possible).

9. INSTALLING THE PUMP

9.6 CONNECTING TO POWER VIA RCD – FIG.12

Once you have the pump safely situated and the float switch adjusted, if required, you are ready to turn on the pump.

Plug your pump into a Residual Current Device (RCD) such as Draper Stock No.69307 (8) or 89301 (9) and connect to your mains supply.

FIG.12

9.7 SWITCHING ON THE PUMP

On switching on your socket, the pump will begin to operate (if water level high enough to operate the float switch). The pump will begin to expel the water via your hose and once the water level drops to the required level, the float switch will automatically switch off the pump.

*Note. Stock No.98911 is not supplied with a float switch.

10. MAINTENANCE

10.1 CLEARING OBSTRUCTIONS IN THE IMPELLER HOUSING – FIG.13

WARNING: For your own safety, remove plug from power supply before maintaining your submersible pump.

- If the impeller becomes blocked or obstructed, remove base plate by removing the screws.
- DO NOT lever the impeller as this will cause damage due to its brittle construction.
- Take note of the orientation and order with which the components were removed to ensure the correct re-assembly.
- Rinse with clean water to flush.

NOTE: This pump is fitted with an overload safety device. In the event of the motor overheating, the device will automatically switch off. Allow to cool for 20 minutes before attempting to restart.

11. OPTIONAL ACCESSORIES

Layflat Hoses:

Stock No.	Part No.	size	Length	Description
36919	ASWP1	25mm. I.D.	5m.	Hobby/DIY Hose
45343	ASWP3	25mm. I.D.	10m.	Heavy Duty Hose
36947	ASWP4	32mm. I.D.	10m.	Heavy Duty Hose

12. TROUBLESHOOTING

12.1 TROUBLESHOOTING CHECKLIST

WARNING:

For your own safety, always turn the main switch on the machine "Off" and remove the plug from the power supply before carrying out any servicing or maintenance.

FAULT	POSSIBLE CAUSE	REMEDY
Motor does not start or makes no sound	<ol style="list-style-type: none">1. Make sure the motor is powered2. The pump is disabled by the float	Service agent. <ol style="list-style-type: none">1. Make sure the float can move freely.2. Increase depth of the water.

Make sure the fluid being pumped is not too dense, causing the motor to overheat.2. Make sure the temperature of the water is not too high.3. Make sure there is no solid body obstructing the impeller.4. Power supply doesn't comply with the nameplate's data.

13. EXPLANATION OF SYMBOLS

13.1 EXPLANATION OF SYMBOLS

Single value noise marking.
(Maximum declared
A-Weighted sound power level
in decibels).

**Do not dispose of WEEE*
unsorted municipal waste.**

Warning!
Read the instruction manual.

Warning!
Not to be used in fish ponds.

14. DISPOSAL

14.1 DISPOSAL

- At the end of the machine's working life, or when it can no longer be repaired, ensure that it is disposed of according to national regulations.
- Contact your local authority for details of collection schemes in your area.

In all circumstances:

- Do not dispose of power tools with domestic waste.
- Do not incinerate.
- Do not abandon in the environment.
- Do not dispose of WEEE* as unsorted municipal waste.

* Waste Electrical & Electronic Equipment.
