Modern America was built with Dickies®. Since 1922, America's hardest working men and women have chosen our hard-wearing workwear to build, maintain, and cultivate a continent. Their Dickies® workwear helped them do a better job. When their work took them down to their hands and knees or the weather turned against them, their workwear flexed with them.

It protected them from knocks and abrasion, and kept them warm, dry, or cool according to their needs. After almost a century of hard work, we know what makes a comfortable fit. We're now a global brand with regional styles to suit the tastes, tasks, and climates of a hard-working world. We're the world's trusted leader in workwear.

Although Dickies® is proud of its long and illustrious history, it is unmistakably a company of the 21st Century. Not only has Dickies® adopted the latest manufacturing processes and performance materials to improve its product range; they continue to display innovation in workwear design to meet the changing demands of its customers.

Recognising the growing demand for workwear with a more contemporary styling, Dickies® has responded by adapting modern hiker boots and training shoe designs into regulation safety footwear. All the new styles are fitted with either steel toe-caps or a composite casing, both of which meet current European standards.

Dickies® is committed to maintaining its position in the industry by producing hardwearing functional workwear that combines quality and value for money: the philosophy that has seen it become an instantly recognisable brand with a proven reputation.

*Over 18 months of meticulous product development has gone into this most advanced range of products to date*

# 01

**DICKIES PRO**  
WORKWEAR

New to our range this year, these premium garments offer a superb ergonomic fit along with exceptional comfort and breathability.

# Symbol Guide

## 1 Outer Layer

Outer layer is waterproof, hard wearing and breathable. This layer is great for weather protection and moisture is able to "breathe" out whilst stopping rain and wind from getting in.

## 2 Middle Layer

Middle layer is for warmth and insulation, also helping to transport moisture away to the outer layer.

## 3 Inner Layer

Inner layer transports away moisture built up to ensure you are kept dry. This layer is breathable, comfortable and keeps you at a desirable temperature.

# Fabric Guide

As long as Coolcore is wet or you are sweating, it will keep on cooling.

Our chemical-free fibers deliver three distinct functions - wicking, moisture circulation and regulated evaporation - to reduce the fabric's surface temperature and maximum cooling. And, because it's chemical free, the cooling benefit never washes out

A high performance fabric extremely resistant to tearing, scuffing and abrasion.

CORDURA® is a registered trademark of INVISTA for durable fabrics.

High-comfort stretch fabric with long-lasting shape recovery, even after repeated industrial laundering

This fabric has been developed using a TenCate Stretch Recovery™ technology. This gives the fabric excellent stretch and recovery properties, as well as superb performance in industrial laundering.

High quality zippers and fasteners made by the most modern equipment and are mass produced under extreme quality control.

# 05

## COVERALLS

Our collection of coveralls include 100% cotton examples, ideal for working in hot climates.

Reflective tape elements are also a feature for some long sleeved cotton overalls to add visibility on the job

A high quality garment ideal for rugged work, Teflon™ fabric protector provides maximum stain repellency

### Fabric Guide

High quality zippers and fasteners made by the most modern equipment and are mass produced under extreme quality control.

Teflon™ is a trademark of The Chemours Company FC, LLC used under license by Williamson-Dickie Europe Limited.

**PRINTING SERVICES**

Dickies embroidery and printing service can add logos or specified text to the vast majority of our product range. All you need to do is to contact us with your details and allow us to do the rest. We will require the following:

- Your company name and/or account number and contact details.
- The products and colours that you would like to embellish.
- The logo details with preferably a JPG or BMP image file if possible.
- The position of the logo(s) e.g. Left breast area, back etc.
- Any specific pantone colours that you wish us to adhere to.
- The number of embellishments you require.

Our direct contact details are:

Tel: **01761 419 419**

Email: **ukquotes@dickies.com**

NOTE

Garments designed for roadside working meet the current standards laid down in the safety at street and road works code of practice.

(EN ISO 20471 Class 1, 2 or 3) or (EN471 Class 1, 2 or 3)

The Railway Group Standard GO/RT 3279 has been updated, and replaced by The Rail Industry Standard: RIS-3279-TOM. As there are no technical changes to the standard, all Dickies garments that are certified to GO/RT 3279 will be automatically compliant to the new RIS-3279-TOM standard

## Symbol Guide

X EN 471:2003 + A1:2007  
Now superseded by  
Y EN ISO 20471:2013

This International Standard specifies requirements and test methods for protective clothing capable of signalling the user's presence visually. This clothing is intended to provide conspicuity in hazardous situations under any light conditions by day and under illumination by vehicle headlights in the dark.

Performance requirements include colour and retroreflection properties. Further, minimum areas and the configuration of the visible area are specified.

X Classification of the applied area of fluorescent and retro reflective material Classes 1 to 3 (of which class 3 is the highest achievable class)

Y Classification of the quality of the applied retroreflective material Level 1 and 2 (of which 2 is the best)

\*While we upgrade our stock to EN ISO 20471:2013, customers may receive an EN 471:2003+A1:2007 garment. Please contact your sales representative if you specifically require an EN ISO 20471:2013 garment.

X EN ISO 20471:2013

The following pictogram placed on a garment indicates adherence to the EN ISO 20471 standard.

X Classification of the applied surface of fluorescent and retro reflective material Classes 1 to 3 (of which class 3 is the highest achievable class)

EN1150  
High Visibility clothing for non-professional use.

X EN 343  
Y Protection against rain  
EN 343

Resistance to water penetration and water vapour resistance are the two main properties which are tested in EN 343.

The following parameters are used:

X Resistance to water penetration (3 levels of which 3 is the highest achievable class).

Y Water vapour resistance - Breathing properties (3 levels of which 3 is the highest achievable class).

EN ISO 20471 AND EN 471  
Classification of fluorescent and retroreflective surface (X)

	CLASS 1	CLASS 2	CLASS 3
Fluorescent material	0,14m <sup>2</sup>	0,50m <sup>2</sup>	0,80m <sup>2</sup>
Reflective tape	0,10m <sup>2</sup>	0,13m <sup>2</sup>	0,20m <sup>2</sup>

“Incorporating industry standard fabric technologies”

# 17

## FLAME RETARDANT

Designed primarily for the oil and gas industry, which demands the highest level of comfort and durability, plus minimal shrinkage for laundry care, our Flame Retardant workwear includes Proban® & Pyrovatex® technologies.

# HEAT AND FLAME PROTECTION GUIDE

## SYMBOL GUIDE

### Made to Order (MTO)

Our Made to Order (MTO) products are available for quantities greater than 500 pieces. In addition to our catalogue MTO's customer bespoke products can also be designed and produced for corporate clients.

### EN ISO 11612

Protective clothing for workers exposed to heat and flames (not including Welders and Fire Fighters).

The standard specifies the performance requirements for garments which protect the body from heat and flame.

### EN ISO 11611

Protective clothing for use in welding and allied processes.

The standard specifies 2 classes with specific performance requirements:

- Class 1 lower level: less hazardous welding situations.
- Class 2 higher level: more hazardous welding situations.

### IEC 61482-2

Protective clothing against the thermal hazards of an electric arc.

This performance standard specifies requirements and test methods applicable to materials and garments used by electrical workers to protect against the thermal hazards of an electric arc. Requirements address to the relevant general properties of the textiles and the arc thermal resistance properties. The arc thermal performance can be tested against the (European) Box test (representing a constrained and directed arc), which is carried out at a current of either 4kA (class 1) or 7kA (class 2).

### EN 1149-5

Protective clothing - electrostatic properties.

Antistatic PPE are certified to EN 1149-5:2008 as this standard covers the performance requirements and refers to the choice of 2 different test methods [EN 1149-1 or EN 1149-3].

### EN 471

Specifies the requirements for high visibility clothing capable of visually signalling the user's presence. The high visibility clothing is intended to provide conspicuity of the wearer in any light condition when viewed by operators of vehicles or other mechanized equipment during daylight conditions and under illumination of headlights in the dark. Performance requirements are colour and retroreflection as well as minimum areas and placement of the materials in protective clothing.

### EN 342

This symbol placed on a garment indicates adherence to the EN 342 Standard for protective garments against cold environments. Thermal insulation and air permeability are essential elements in cold protection and thus marked on the label.

Explanation of the classification:

Y1 Icler : Resultant effective thermal insulation value (in m<sup>2</sup>.K/W) of the ensemble with standard reference underwear - tested with a moving manikin.

Y2 Icle : Effective thermal insulation value (in m<sup>2</sup>.K/W) of the ensemble with standard reference underwear - tested with a stationary manikin.

Y3 Classification of the air permeability (3 levels, of which 3 is the highest).

Y4 Optional classification of resistance to water penetration (2 levels, of which 2 is the highest).

Note "X" marked next to the symbol indicates that the garment was not tested against this property.

Williamson-Dickie is using the moving manikin test to measure thermal insulation (Icler).

Standard underwear, type B for ensembles is used, consisting of: Undershirt with long sleeves, Long underpants

Suitable for industrial laundry at 75°C

Suitable for domestic laundry

## GENERAL

A user guide is included with all our garments. We recommend that this be read carefully as the guide gives important information about the protection the garment provides along with wash care instructions and important information that contributes to optimal protection for the wearer. Jacket and Trousers should always be worn together as an ensemble to ensure maximum protection.

ISO standards are under constant revision and our designs are regularly revised and updated to ensure compliance to the latest standards. Dickies also manufacture garments to comply with many different International Safety Standard requirements such as NFPA and others upon request.

Most of our garments can be customised with your corporate badges and logo's. We can also accommodate requirements for bespoke customised garment design requests from our larger customers ensuring a unique corporate identity. Please contact us for more details.

## PYROVATEX®

Cotton fibres treated with a crosslink resin utilising the heat-cured dialkylphosphonamide process that forms a bond on the molecular level to the cellulose in the cotton fibres. This creates a very strong, durable and protective link that makes the fabric resistant to shrinking or melting when exposed to heat and flame. Our Pyrovatex® fabrics are made from high quality cotton fibres, consequently they are lightweight and comfortable with excellent durability to wash and wear, ensuring Dickies Workwear a long lifetime.

## MODACRYLIC

The permanently flame retardant Modacrylic fibre has been blended with cotton for a natural feel and maximum comfort. The flame retardant properties of Modacrylic are a part of the fibre resin of the Modacrylic fibre and as a consequence cannot be removed. There is no deterioration in flame retardancy after either repeated washing or normal use over time.

## LAUNDRY CARE

Flame retardant clothing should be laundered strictly in adherence with the instructions on the care label in every garment, if in any doubt please consult with Dickies as to how to best care for your workwear. Poor laundry care can have a serious adverse effect on a safety garment. For example water which is too hard affects the cleaning process and may contain mineral salts to build up on the fabric, deposits of this type can adversely affect the FR properties of the clothing and in extreme cases of build-up can actually exacerbate the flammability of the clothing and act as an accelerant if exposed to an ignition source.

Cotton, Aramid and Modacrylic garments can be laundered using the recommended temperatures and wash cycles. Some 3% minimal shrinkage can be expected and is a natural reaction from both the fibres and the weave construction, most noticeable during the first 3 to 5 washes. Please be careful not to "over dry" garments. Dickies recommend that this is taken into consideration when selecting your preferred garment. Exposure to excessive drying temperatures will result in higher than normal shrinkage. Starches, fabric softeners, and other laundry additives should be avoided.

DO NOT USE CHLORINE BLEACH OR OTHER DETERGENTS OR CHEMICALS CONTAINING HYDROGEN PEROXIDE.

## PROBAN®

Cotton fibres treated with a phosphonium salt precondensate, polymerized with a gaseous ammonia (THPOH-NH3) process. During the Proban® process, an inert cross-linked polymer is formed.

This polymer is embedded within the individual fibres and is insoluble. It cannot be removed by washing and can only be removed by mechanical abrasion or rendered ineffective through incorrect laundering (see below).

Proban® fabrics comfortably meet the minimum standards required of 50 washes at 75°C. Each batch of Proban® treated fabrics are independently tested to this standard and are certified by Solvay, producers of the Proban® chemical, to maintain its flame retardant characteristics for 50 washes providing the correct laundering instructions are followed.

**FR5404**  
**Pyrovatex®**  
**Antistatic Coverall**

EN ISO 11612:2008 (A1 B1 C1 F1), EN ISO 11611:2007 Class 1 A1, EN 1149-5:2008

Pyrovatex® treated antistatic 320gsm coverall; offering maximum protection against heat and flame with antistatic fibre for protection against electrostatic discharge.

**Features**

- 1 Antistatic protection
- 2 Flame-retardant Nordic style reflective tape for enhanced visibility
- 3 Extended collar for additional vulnerable neck/throat protection
- 4 Generous action back for ease of movement
- 5 Reinforced construction with feldlock triple stitching to major seams and bar-tacks to stress points
- 6 Side access pockets allowing entry to undergarments
- 7 Two back pockets flexible rule pocket with safety gusset feature
- 8 High quality and long lasting, two way YKK™ zips

**Fabric**

98% cotton with Pyrovatex® FR treatment  
2% antistatic fibre

## FOOTWEAR

When you step into your workplace you need the right footwear: safety toe caps and midsoles, heat-resistant outsoles, superb grip and supreme comfort.

This is footwear for people who are on their feet, on the move and on top of their job.

## Safety Classifications

Safety footwear standard EN345 is being superseded by EN ISO 20345. Any footwear that has been tested to EN345 can continue to be sold, however any new designs will have to be tested to the new standard.

Which standard your footwear is tested to is identified on the product information label, this is found within the boot or shoe.

**SB** Toe protection tested with 200 joules impact and 15kN compression force.

**S1** As SB, plus:  
 1 Closed seat region (fully enclosed heel).  
 2 Antistatic properties.  
 3 Energy absorption of seat region.  
 4 Resistance to fuel oil.

**S2** As S1, plus:  
 1 Water penetration and water absorption, resistance

**S3** As S2, plus:  
 1 Penetration resistance.  
 2 Cleated outsole.

**S4** Upper from all rubber or all polymeric with:  
 1 SB toe protection.  
 2 Closed seat region.  
 3 Antistatic properties.  
 4 Energy absorption of seat region.  
 5 Resistance to fuel oil.

**S5** As S4, plus:  
 1 Penetration resistance.  
 2 Cleated outsole.

## Symbol Guide

-  **SB** Toe protection.
-  **P** Penetration resistance outsole.
-  **E** Energy absorption of seat region.
-  **A** Antistatic footwear.
-  **C** Conductive footwear.
-  **WRU** Water resistant upper leather.
-  **WR** Water resistant footwear (code I only).
-  **CI** Insulation against cold.
-  **HI** Insulation against heat.
-  **HRO** Heat resistant outsole compound tested at 300°C.
-  **FO** Outsole resistant to fuel & oil.
-  **SRA** Slip resistance on a ceramic tile floor with sodium lauryl sulphate solution.
-  **SRB** Slip resistance on steel floor with glycerol.
-  **SRC** Slip resistance on steel floor with glycerol and ceramic tile floor with sodium lauryl sulphate solution.

## The three big advantages of polyurethane!

### Lightweight

PU is much lighter than rubber or PVC thus offering increased comfort. The flexible material also feels really soft to the touch, which makes polyurethane boots extra comfortable to wear.

### Thermal Insulation

Thanks to the thermal-insulating effect of polyurethane, your feet will feel warm in winter and cool in summer. Even at extreme temperatures to as low as -50°C, polyurethane boots will stay supple and keep your feet warm.

### Durable

Tests have shown that polyurethane boots can last up to three times longer than boots made from rubber or PVC when properly cleaned and used in the same conditions. PU boots are also resistant to oil, fats, manure, acid and chemicals.

# Symbol Guide

-  Vented Frame
-  Rubber Nose Piece
-  Adjustable Nose Piece
-  Ratcheting Temples
-  Co-Injected Temples
-  Adjustable Temples
-  Rubber Tips
-  Foam Padding
-  Includes Strap
-  Dual Pane Lens

## Dual Pane Lenses For Extreme Cold Conditions

Dual pane lens provides the ultimate anti-fog performance by isolating the temperature difference inside and outside of the eyewear.

The outer polycarbonate lens protects against the environment and provides 99% protection against harmful UV rays. While the inner acetate lens is coated with H2X™ Anti-fog Technology for even more resistance to fogging.

## SP1050 Dickies Lightweight Fogbuster Goggle

- Features**
- 1 Exceeds ANSI Z87.1 High Impact Requirements; CE EN 166 Certified; CAN/CSA Z94.3-07 Certified; AS/NZS 1337; MIL-PRF 32432
  - 2 Sporty, lightweight design eliminates the bulkiness and weight of a goggle
  - 3 Quick Release Interchangeable Temples and Strap
  - 4 Vented foam carriage provides maximum dust protection, as well as sufficient airflow outlet for heat
  - 5 Dual pane lens provides the ultimate anti-fog performance by isolating the temperature difference inside and outside of the eyewear, provides 99.9% protection against harmful UV rays
  - 6 Outer polycarbonate lens protects against the environment, while inner acetate lens is designed to prevent fogging. The thermal system provides anti-fog protection in the worst weather conditions or extreme-temperature working environments
  - 7 Outside lens is coated with anti-fog technology for even more resistance to fogging, due to extreme temperatures

**Material**  
Polycarbonate outer lens. Acetate inner lens

**Sizes**  
One size

*Provides the highest levels of comfort as well as maximum functionality in all conditions*

Tencel® is an all-natural fibre. Its controlled nano-fibre structure moves moisture away from the body, keeping you cool when the temperature is hot and warm when it is cold.

Bamboo Fibre with wicking and natural anti-bacterial properties, making the thermals the ultimate in comfort.

# 20

## ACCESSORIES

Workwear accessories including Thermal clothing and under garments, hats, caps, belts and backpacks.

Thermal clothing and under garments provide exceptional warmth for outdoor workers or any work or DIY task in cold conditions.
